Protective Gloves

Objective: Identify what types of gloves are needed for the job, if any at all.

How to Use This Module

Many jobs in the green industry require the use of gloves. For this module:

- Read the information below on the different types of gloves and the protection each offers.
- Discuss when gloves are needed — and when they should not be used.
- Ask your supervisor to show you types of gloves during the session and discuss their proper use.
- Review the important points.
- Take the True/False quiz to check your learning.

Background

Gloves can protect hands and forearms from cuts, abrasions, burns, puncture wounds, skin contact with hazardous chemicals, and some electrical shocks.

Not every job requires gloves. In some cases it may be dangerous to wear gloves. Never wear gloves while working with or around moving machinery, such as mills, lathes, moving conveyors, or power-take-off (PTO) shafts. If the glove got caught in the machinery it could pull the hand and arm in, causing amputation.
Choosing Protective Gloves

Gloves are made of a variety of materials. It is important to know what kind of protection each glove type can offer. Using the wrong glove can cause injury. Cotton gloves could absorb dangerous chemicals causing the skin to burn. Using the correct glove reduces hazards in the workplace. It is the employer’s responsibility to determine how long gloves can be worn and if they are reusable. However, the employee should inform the employer if the employee feels the gloves should be replaced.

Review These Important Points

- Choose the right glove for the job.
- In some situations, using gloves can be dangerous.
- Check for specific recommendations for the type of glove to use when working with chemicals.

About These Modules

The author team for the training modules in the landscape and horticultural tailgate training series includes Dee Jepsen, Program Director, Agricultural Safety and Health, Ohio State University Extension; Michael Wonacott, Research Specialist, Vocational Education; Peter Ling, Greenhouse Specialist; and Thomas Bean, Agricultural Safety Specialist. Modules were developed with funding from the Occupational Safety and Health Administration, U.S. Department of Labor, Grant Number 46E3-HT09.

Any opinions, findings, conclusions, or recommendations expressed in this publication are those of the author(s) and do not necessarily reflect the views of the U.S. Department of Agriculture or the U.S. Department of Labor.

Answer Key:  1 = T, 2 = T, 3 = T, 4 = T, 5 = T.
Protective Gloves

Name____________________________________

True or False?

1. Use neoprene, vinyl, or rubber gloves when working with chemicals. T F

2. Leather gloves protect hands from rough objects, chips, sparks, and moderate heat. T F

3. Metal mesh or Kevlar knit gloves protect against cuts from knives or other sharp objects. T F

4. Not every job requires the use of gloves. T F

5. Cotton fabric gloves protect against dirt, splinters, slippery objects, or abrasions. T F
